ReignCloud Reporting

Overview

ReignCloud Reports

The ReignCloud Dashboard Subscription is offered to customers using the Reign Monitoring Solution with installed Reign Devices that have cellular or satellite connectivity. Additionally, ReignCloud Reports is a feature that allows customers to receive custom reports based on the data collected by Reign Solutions.

Process

Each ReignCloud customer receives training on using their ReignCloud dashboard. For customers who desire custom reports, a Reign Support specialist will collaborate with you to determine the specific information you want included in your reports. Our Reign team will then add these reports to your dashboard and provide instructions on how to run and download the reports.

Requirements:

1. Determine what data points you want to see.
2. Determine what format you want the information. (Table, Graph, etc.)
3. Provide any calculations you need on the information, for example pump runtime, injection rates, $Q=Vt=10,000 \text{ bbl} / 30 \text{ days} = 333.33 \text{ bbl/day}$ etc.

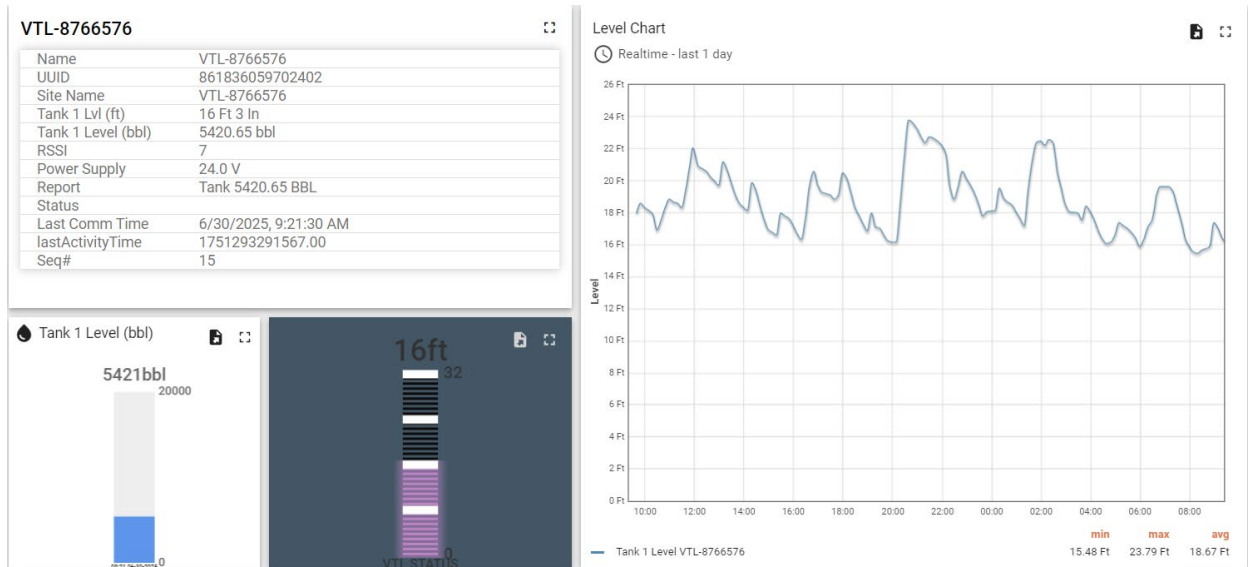

Sample Report Process

Reports can be generated from any information available on the ReignCloud platform. Report formats include:

- Tabular Information (Excel or CSV)
- Graphs
- Error Report Information
- Predictive Analysis (based on historical information)

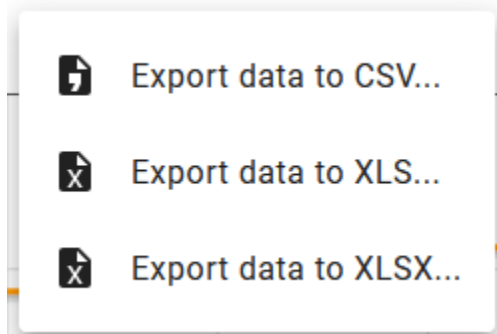

Reports such as these can be run on-demand and downloaded to Excel or CSV files for further analysis.

Graphs are an excellent tool for quickly visualizing your data. You can also download these graphs in your preferred format for presentation.

Export widget data

1. At the top right-hand corner, select the Export widget data icon
2. Then, determine how you would like to receive the data.
